POINT OF SALE

Maintain absolute control over all aspects of sales.

Basic Module

2 Soft Systems Point of Sale is a completely customized automated point of sale management system that supports barcodes and touch-screens, and integrates with the complete general financial applications in real time. Replacing stand-alone cash registers or separate retail software.

2 Soft Systems Point of Sale empowers your managers with all the audit trails needed for end-of-day reports that allow cash registers to be secured so they can be tallied individually. In addition, 2 Soft Systems Point of Sale enables inventory tracking in real time, allows capture of all customer information making for improved service, and permits flexible product pricing configuration with checks to prevent your staff from selling at lower than designated rates.

Point of Sales (POS) System is designed to print cash/credit invoices to customers during sales data entry and update on-line inventory stock, item movements and generate sales accounting.

It is an add on feature to the inventory system and optionally integrated to the accounting system. POS handles remote/stand alone and/or on-line station.

The program is based on advanced relational data base technology (Sybase Adaptive Server Enterprise, SQL) and provides maximum flexibility, ease of use and performance. The POS System include recovery program (Target Locking) for data recovery. Customers may order the Arabic or English version. Either options may be ordered in Single/Multi users, and runs on Windows 98, 2000, XP, 2000/2003 Servers (NT Technology).
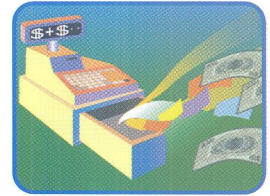

System Functions

The basic programs provide complete point of sales & inventory control and have the following functions & facilities:

* Data entry services for cash/credit sale of stock items.
* Fully compatible with inventory reporting facilities.
* Automatic generation of sales accounting, accounts receivable/cash, cost of sales & inventory.
* Direct stock quantity update.
* Supports discount, shipping charges, and delivery charges.
* Customized level of security can be defined for each user, the system log the name of the user on all transactions entered by a specific user for audit purpose.
* Remote station handles sales data entry and transferring daily data to diskette for processing with master operator (main office) or through dial up modem through PcAnyWhere software.
* On-line station handles sales data entry and direct update to inventory and accounting systems.
* On-line master station handles importing and processing remote station data. During inventory processing the system retains sales transactions, which did not have enough available stock quantity. The master operator can try and post these retained transaction as and when the stock is available. He also has the option to clear these pending transactions and the system will make automatic adjustment to inventory and accounting system.
* All reports to screen or printer.

* Dynamic unit to carton to case inventory management.
* Track sales of serialized items.
* Discounts by percentage and/or multiple prices.
* Barcode scanning.
* Item Inquiry before and/or during sale.
* Access items by item number or vendor's item number.
* Add new items at POS (optional for off-line remote sites).
* Track sales of apparel items by size, color, etc.
* Dynamic accounts receivable updating.
* Credit Limit checking on charge accounts (optional).
* Payments on charge accounts with printed receipts.
* Customer lookup by name or number.
* Prints invoices and paper tape receipts.
* Cash drawer management and reporting.
* Salesperson tracking.
